SUMMARY

Final-year B.Tech Information Technology student (CGPA 8.94) at Government Engineering College Palakkad with hands-on experience in full-stack development, AI/ML, and open-source contribution. Comfortable across the stack — React, Node.js, Python, Firebase — and focused on writing clean, maintainable code that ships to real users.

EDUCATION

B.Tech, Information Technology

Government Engineering College Palakkad

2023 — 2027

CGPA: 8.94

TECHNICAL SKILLS

Languages	JavaScript, Python, Java, C, PHP
Frontend	React, Next.js, Tailwind CSS, HTML5 / CSS3
Backend	Node.js, Express.js, Flask, REST APIs
Databases	MongoDB, PostgreSQL, MySQL, Firebase Firestore
AI / ML	PyTorch, scikit-learn, OpenCV, Pandas, NumPy
Tools	Git, GitHub, Supabase, Firebase, Vercel, Figma, Postman

EXPERIENCE

Infosys Springboard

2025

Python Developer Intern

- Built an AnimeGAN-based image stylization pipeline using PyTorch and OpenCV for style transfer on real images.
- Developed an interactive web application with Flask integrating cartoon, pencil sketch and anime-style transformations.
- Designed the full ML inference pipeline — preprocessing, model inference, post-processing and output delivery.

Skills: Python, PyTorch, OpenCV, Flask, Deep Learning, GANs

SSOC — Social Summer of Code

2026

Open Source Contributor

- Contributed 12 merged pull requests to SafeHaven, a crowdsourced disaster-management platform.
- Developed full UI pages (Evacuation Safety, Disaster Coordination dashboards) and resolved merge conflicts.
- Collaborated with mentors through code reviews, improving code quality and following open-source best practices.

Skills: HTML, CSS, JavaScript, Git, GitHub, Code Review

PROJECTS

AMLPS — School Bus Fee Management System | React, Supabase, Tailwind CSS, Vercel

- Production system deployed at a real institution — handles student records, fee tracking and route management.
- Implemented bulk Excel import/export, filterable search table, and role-based layout with React Router Outlet pattern.
- Secured environment variables and managed Supabase RLS policies for multi-user data integrity.

AI-Based Image Transformation Platform | Python, PyTorch, Flask, OpenCV, MySQL

- Deep-learning web app that transforms photos into Cartoon, Pencil Sketch, and Anime styles using AnimeGAN.
- Built end-to-end ML pipeline: image upload, preprocessing, model inference, watermark controls and output delivery.
- Integrated admin dashboard, subscription-based feature gating and interactive games within the platform.
- GitHub: github.com/Athulyakrishna-k1312/Image_transformation_tool

VoltCloud — Smart Energy Monitoring Platform | Node.js, Express.js, Firebase, Cloud Firestore

- Cloud-based IoT platform collecting, processing and aggregating energy readings into real-time and historical analytics.
- Automated 15-minute, daily and monthly aggregation pipelines using Node.js cron jobs and Firestore.
- Implemented Firebase Authentication, RESTful backend services and secure API key handling.
- GitHub: github.com/Athulyakrishna-k1312/voltcloud

ACHIEVEMENTS & ACTIVITIES

- NPTEL Elite Certification — consistent top performance across the full course.
- Media Team Member, μ Learn GECPKD EXECOM — content creation, event promotion and community outreach.
- Campus Ambassador, QNAYDS — student outreach, workshop promotion and referral-based engagement.
